Sherif Ashraf Mohamed

Full-Stack AI Engineer

sherifelamir2003@gmail.com | linkedin.com/in/sherifElamir | github.com/SherifAshraf2003

Experience

Founding Engineer Feb 2026 – Oct 2026

Dialbird

- Owned the web application and a large part of the backend, shipping features from design through production for thousands of daily active users.
- Developed a scalable, real-time AI voice agent served over Twilio, handling concurrent users with no loss in voice quality.
- Built integrations with HubSpot, GoHighLevel, Slack, and other third-party platforms.
- Built backend services for asynchronous processing using Redis, job queues, and background jobs.
- Ran production on AWS, including ECS, EC2, VPCs, load balancers, and databases, with CI/CD pipelines.
- Reduced AWS costs by approximately 30% by optimizing ECS services and EC2 instances across staging and production.
- Reported directly to the co-founder, connecting engineering decisions to product and business goals.

"I could always count on Sherif to deliver, no matter how complex the task or challenge." – Omar Aboufandi, Co-Founder

Founding Engineer and COO Apr 2025 – Jan 2026

PlawLabs (Vulnzap, Brief)

- Built and launched the frontend, VS Code extension, and MCP tool for Vulnzap, a vulnerability management platform.
- Architected the developer-facing ecosystem, enabling real-time security scanning and vulnerability tracking from the IDE.
- Improved detection efficiency by approximately 40% and supported integration across multiple development pipelines using React, TypeScript, Node.js, Redis, and Supabase.
- Built Brief, an AI web app that summarizes information in seconds, using Next.js, OpenRouter, Groq, and Supabase.

Freelance Full-Stack and AI Developer Aug 2025 – Present

Upwork

- Delivered client projects end to end, earning a 100% Job Success Score across 6 completed jobs.

Network Operations Center Intern Aug 2024 – Sep 2024

Orange Egypt

- Increased KPI monitoring efficiency by 65% by building a React and Node.js web app that analyzed Excel traffic cell data and automated custom reporting.

Projects

- **LeadMate (Co-Founder):** Co-founded and built the infrastructure and frontend of an AI lead generation SaaS with 100 users, automating WhatsApp responses in under 3 seconds with real-time lead tracking and analytics. Tech: Next.js, Node.js, Twilio, Supabase.
- **Manasetak:** Built an education platform where instructors create custom course portals, with secure session-based authentication, subscription management, and custom domains. Improved performance using server-side rendering and Incremental Static Regeneration. Tech: React, Next.js.
- **AI Study Assistant:** Built a RAG application that lets users upload documents and query them through a chatbot backed by a vector database. Tech: Next.js, LangChain, Pinecone.

Skills

Languages: TypeScript, JavaScript, SQL, C, C++, Python

Frameworks and Libraries: React, Next.js, Node.js, Tailwind CSS, LangChain

AI: LLMs, RAG, Voice Agents, Pinecone, MCP

Backend: Redis, Job Queues, Background Jobs, Upstash, Supabase, Twilio

Cloud and Infrastructure: AWS (ECS, EC2, VPC, Load Balancers), CI/CD

Databases: PostgreSQL, MySQL, MongoDB

Education

B.E. in Computer Engineering Sep 2021 – Jun 2026

Egypt University of Informatics (EUI)

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Computer Networks, Databases, Machine Learning, Neural Networks, Computer Vision, Information Retrieval

Awards

- **Minesweeper Robotics Challenge:** 1st place regionally for designing a robot to detect landmines in a simulated field.
- **Egyptian Collegiate Programming Contest (ECPC):** Competed for three consecutive years.
- **ROV Competition:** Helped design and build a submarine to perform underwater tasks.
